WIRELESS ALARM COMMUNICATIONS

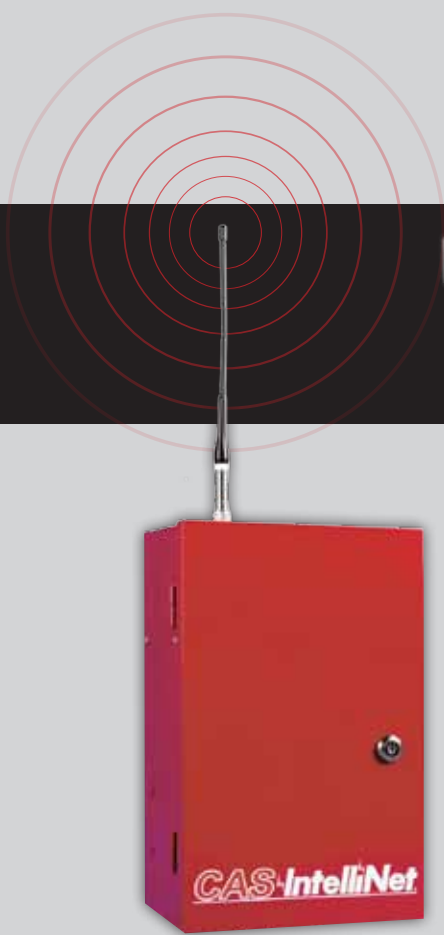

**Protecting your  
most precious assets**

## Wireless alarm transmission for fast, safe and reliable alarm reporting.

Don't trust your home or business to outdated alarm transmission systems that are slow, can fail or be rendered inoperative when they are needed most. CAS-IntelliNet is the fastest, most reliable method to transmit alarm signals.

Your alarm system is only as reliable as its ability to transmit alarm signals to the monitoring center. Used in over a hundred thousand locations in 130 countries, CAS-IntelliNet has proven to be the fastest, most reliable, method to transmit alarm signals. Its patented wireless mesh technology insures that your alarm gets transmitted faster and more reliably than traditional alternatives.

### Fire Facts:

- ! *Fire doubles in size every 30 seconds*
- ! *20 people die by fire every 24 hours*

Every second counts when disaster strikes. Telephone lines can take as much as 30 seconds or longer to send your alarm to the monitoring station while your wireless CAS-IntelliNet alarm arrives in 2-3 seconds. In the first few seconds of a fire, your telephone line could also be destroyed along with your connection to the monitoring station. Rely on fast, safe and secure CAS-IntelliNet wireless monitoring to get your alarm out.

### Burglary Facts:

- ! *39% of line cut offenses are at residential locations\*— 62% of those result in violence*
- ! *Phone line cutting is the M.O. of the serial burglary offender*

Without CAS-IntelliNet, criminals can disable your alarm system with a simple pair of pliers. With no lines to cut, CAS-IntelliNet wireless alarm transmission means you have secure and reliable alarm monitoring. And the alarm reaches your monitoring service in a fraction of the time that telephone connections can take.
